

WEI Application Development

WEI is always looking for ways to make our customers successful by streamlining processes.

We have a team of engineers that have developed a number of business applications for our customers and for resale. When working with our customers, we have found that in order to create real business outcomes for them, we sometimes need to develop something from the ground up. We have the resources to do that. Helping our customers be successful is how we measure our success.

Build a Cab

Originally designed for a Fortune 500 company, this application tracks the hardware contained in data center racks. The complete platform includes a tablet application and administration panel that allows users to create, manage, audit, and report key information about all the contents of racks in a data center or closet. This process is very fast and easy, utilizing a simple drag & drop interface and QR reader. This provides companies with better control and a complete inventory of all data storage capacity. All the data collected is updated in the back office dashboard administration panel—allowing IT personnel to make informed decisions about rack utilization in real time.

WEI Asset Tracking System

This application is designed to keep track of the refresh cycles of a customer's client devices (workstations, desktops, notebooks). Customers provide their employee roster and existing asset information, and WEI uses this information to notify employees when they're eligible for a new system.

WEI can also track VIP employees who may be on a faster refresh cycle. We expedite the process for VIP users so that their systems are imaged and shipped with priority status and keep track of pertinent information for the systems we ship—including employee name, email address, ID number, ship location, model info, serial number and asset tag. We can provide filtering and searching capabilities using this data as well as refresh eligibility status and trending and asset metrics.

Customer Inventory Portal/Warehouse and Delivery Ticketing System

WEI's customers can see which parts and quantities of equipment are being held for them in the WEI warehouse. Customers can request a delivery from that inventory using this system. The delivery request is then confirmed and scheduled, referencing the date, location, point of contact, and other customized references, including the customer's asset numbers. Upon delivery completion, the portal is updated with the proof of delivery.

Historical records are kept of all of the requests, including:

DELIVERIES
INVENTORY LEVELS
ASSET TAG NUMBERS

LOCATIONS
DATES

PO NUMBERS
DEPARTMENT CODES
RECIPIENT NAMES

Customized reports show customer ordering trends, snapshots, and pending business on the calendar. All information is given in an easily accessible format.

Visitor Log App

This web-based application, which is used with an Android or iPad tablet, controls access into buildings, events, and other venues. Its complete user registration system generates a temporary badge with all pertinent information about the visitor (including email address, telephone number, company affiliation, even a photograph) in less than a minute—making it easy for security personnel to verify identity and access privileges. The visitor data is stored in the app for future visits and faster sign ins.

The app also allows the user to check who's registered for an event—and can generate reports with various data about attendance.

Ready for Booking

Ready for Booking is a reservation management system designed to monitor the occupancy status of meeting rooms, conference venues and events.

This application shows the following:

SCHEDULED BOOKINGS
ROOM STATISTICS
ROOM DIMENSIONS

SEATING CAPACITIES
ACCOMODATIONS/
AMENITIES

Activated through a Gmail account and accessible through an Android tablet, iPad or Panasonic Smart TV, the app is easy to configure and use.

About WEI

WEI is an innovative, full service, customer centric IT solutions provider.

Why WEI? We go further. At WEI, we're passionate about solving your technology problems and helping you drive your desired business outcomes. We believe in challenging the status quo and thinking differently. There are a lot of companies that can take today's technology and create a great IT solution for you. But we do more. We go further. And we have the customer, vendor and industry awards to prove it. WEI is a premier technology partner, who always puts our customers first while providing the most innovative solutions for over 25 years.

Fleet Reservation System

WEI developed this application to allow organizations with vehicle fleets to know the whereabouts of vehicles and drivers at all times. This application also tracks as other important information, including vehicle maintenance costs, miles logged, most commonly visited sites, and more.

Drivers log into the app to check out vehicles and specify where and when they are going. Then they log back in when they return. The app can also be used to reserve specific vehicles for future dates and times. Vehicles that are in service are marked off as unavailable.

Want to learn more about any of these apps?
